

## SERIE 3 - ISO15552 cylinders

- Ground chrome steel piston rods, in both the C45 and the stainless steel version.
- Cylinder heads secured with special three-lobe screws. No tie rods.
- Piston rod guide with Teflon-coated steel bushing. Virtually no wear.
- Polyurethane, NBR or FKM/FPM lip seals.

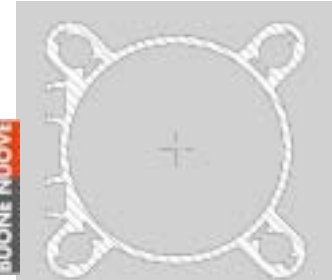

Same features of previous series

2010  
**12**  
BUONE NUOVE

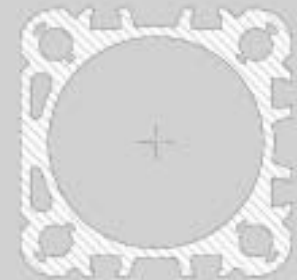

- Dual corrosion protection for the heads, with alodine treatment followed by painting.
- Cylinder head design with a curved outer profile and no cavities to make cleaning easier.
- Painted metallic grey to give a modern, stylish image.
- Fine adjustment of pneumatic cushioning, thanks to the optimised shape of the needle, giving good accuracy and also, when a high speed is required, a high flow rate with the needle in the open position.

- The only difference between series 3 and the others lies in the **liner**.
- The shape of series 3 cylinder liners is designed to **reduce weight to a minimum**.
- **Two T slots**, on the same side as the threaded ports, to allow the insertion of retracting sensors.
- The **other three sides of the liner are smooth, with no grooving**, to make them easier to clean.
