

Leader of pneumatic components.

A global company.

Metal Work is a global company that is close to its customers anywhere, anytime.

Just like energy from the sun or the Earth that turns on its axis, the great forces of nature cannot always be seen but they are everywhere. In the same way, Metal Work operates in Italy and worldwide providing experience and quality in every component.

Looking to the sky.

- 2023 ----- { Publication of Sustainability Report

The Metal Work adventure starts in 1967 with the production of rapid connections for compressed air systems. It is the story of a company that, from nothing, has been capable of building something big, reaching results at world level. With more than 500 workers in their Concesio (BS) factory and more than 800 people making up the Italian and overseas sales organisation, today we are among world leaders in the automatic air system sector.

“We work together for a purpose. There’s nothing that can’t be done better today than yesterday.”

We do things in style.

Some of our subsidiaries

Our products can be found in Italy and abroad thanks to 59 subsidiaries offering an efficient and capillary pre- and post-sales service.

Product quality and a dynamic sales organisation are the basis on which Metal Work founds its leadership, allowing the group to satisfy all possible requests regarding automation systems.

The Metal World.

Automation machines and systems - since **2011** - Italy

NPT actuators - since **2019** - USA

Vacuum - since **2022** - Spain

The mission.

To be a leader, first of all you must be aware of the responsibilities deriving from your work.

At Metal Work we call this awareness Lean Thinking that aims to attack the waste throughout the value chain and through the continued involvement of people, increase flexibility and competitiveness.

Kaizen philosophy.

RESULTS

- Improvement in one's own work
- Savings in energy, material, and other resources
- Improvement in the working environment
- Improvements in machines and processes
- Improvements in office work
- Improvements in product quality
- Ideas for new products
- Customer services and customers relations
- Reduction of waste in all company activities

Our method is based on the introduction in our company of the continuous improvement culture originating from the Japanese KAIZEN management philosophy.

Kaizen is based on the fundamental principle of this 'philosophy': "Energy comes from below", or more precisely on the understanding that a company's results are not due exclusively to decisions at management level, but also from the work carried out directly on products and processes. Management therefore assumes a new role, not so much linked with hierarchy as with the guidance and support of those directly involved in production and other operations that contribute to the company's activities.

Technology and environment.

Long ago we identified an important factor of development in the low environmental impact of our products.

This allows us to achieve winning results by respecting the environment of every country in which we operate. ISO14001 certification for Environmental Management Systems is the proof of how, from 2000 onwards, our company has been a leader in the research and development of technologies that respect the environment.

The certifications.

Recognition of the quality of our work and the certification of our management systems are, first of all and for all of us, a moral undertaking

For this reason, since 1992, Metal Work has been certified according to the ISO 9001 standard, added to which the ISO 14001 Environmental Management in 2000.

In 2007 Metal Work followed up with the OHSAS 18001 standard, guaranteeing a Workers' Health and Safety Management System to match the company's level. In 2018 Metal Work moved from OHSAS 18001 to ISO 45001.

All our certificates have been issued by the German Certifying Body DEKRA ITS, accredited by DAkkS..

ACCESSORIES

Quality above all: from design to production, we follow every single piece to ensure perfect movement.

The factory.

40,000 m² of precision and quality in our production plant:
this is where the movement starts.

Training future.

We dedicate 11,000 hours a year to training our staff, in the conviction that this is the true competitive advantage of the future.

In a mature and global market that is saturated, where all competitors are able to propose complete offers that look more and more alike, the only true added value consists of human assets and relative skills at all levels.
