SERIES XTR FITTINGS

The XTR fittings feature the use of high resistant materials in terms of both chemical compatibility and temperature range.

As automatic fittings, they can be reused countless times without affecting their perfect pneumatic and mechanical tightness.

The specially designed clamping spring holds the tube in place without marking or deforming it.

What's more, the choice of suitable materials and the performance of specific release tests make the XTR range of fittings ideal for use in the food industry and in contact with water.

The threads are round in shape in order to ensure pneumatic sealing, which is guaranteed by an O-ring underside. This solution eliminates the need for sealants (such as Teflon® or similar) which, during screwing and unscrewing, could release solid fragments, thus polluting the environment and the fluid. XTR fittings, on the other hand, can be screwed and unscrewed repeatedly as desired, thereby guaranteeing pneumatic sealing and cleanliness at all times.

| TECHNICAL DATA | | STEEL | TECHNOPOLYMER | | | |
|-------------------|-----|---|----------------------------------|--|--|--|
| Threaded port | | G (BSP)*: | 1/8 - 1/4 | | | |
| Diameter | mm | Ø6 | - Ø 8 | | | |
| Temperature range | °C | - 20 to 150 | See temperature/pressure diagram | | | |
| | °F | - 4 to 302 | | | | |
| Pressure range | bar | - 0.99 to 16 | See temperature/pressure diagram | | | |
| | MPa | - 0.099 to 1.6 | | | | |
| Recommended pipe | | Rilsan PA 11 - Nylon 6 - Polyamide 12 - Polypropylene | | | | |
| | | PTFE for temperatures over 60°C | | | | |
| Fluid | | Vacuum - Compressed air | | | | |

^{*} Cylindrical threads according to ISO 228-1, identified with a letter G. They also correspond to BSP or more precisely to BSPP designation (P stands for Parallel).

COMPONENTS

- (1) Release bushing: PPSU
- ② Locking bushing: PPSU
- 3 Body: AISI 316L steel
- 4 Clamping spring: stainless steel
- (5) Spring supporting ring: PPSU
- 6 Seal: FDA-approved Viton®

- NSF/ANSI 169 standard: products in contact with food.

ADVANTAGES / CERTIFICATIONS

ADVANTAGES

Under-head O-ring

Can be screwed and unscrewed any number of times; no fragments of Teflon® or sealant will contaminate the fluid.

The intermetallic alloy deposited on the surface and Viton® are compatible with numerous substances.

CONFORMITY DECLARATIONS

- NSF/ANSI 372: standard: drinking water system components Lead Content.
- DM 174
- Regulation 1935/04 EU.*

For the product's conditions of use, please refer to the MOCA XTR declaration of conformity available in the certifications section of the Metal Work website.

CERTIFIED

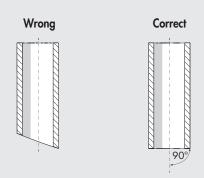

COMPONENT

INSTALLING THE PIPE

Compressed air pipes must be used in compliance with some basic criteria in order to ensure long life and proper operation of the fitting:

- check that the conditions for the installation and use (e.g. temperature and fluid used) comply with the characteristics stated by the pipe
- check the pipe size; oversized pipes could not fit properly, undersized ones could not ensure pipe retention and air tightness.

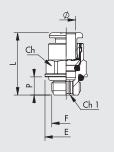

The cut should be as accurate as possible at a right angle with the pipe axis.

- the bending radius of the pipe installed must be as wide as possible. The fittings have been designed to ensure axial seal of the pipe; excessive curvature could considerably shorten the life of the pipe.
- the pipe must not be subjected to excessive axial stress and it must be of the right length for snugly fitting (not too long or too short).
- correct insertion of the pipe into the fitting is essential for air tightness and pipe retention. Make sure that the pipe is pushed right into the seat.
- check that the pipe does not encounter any obstacles or blockages along its way, which could cause tensile stress of the pipe in the fitting.

STRAIGHT, CYLINDRICAL, MALE R1 XTR

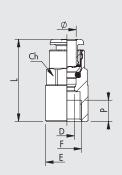

| Code | Ref. | Ø | F | Ch | Ch1 | Р | L | Е |
|---------|--------|---|-----|----|-----|---|------|----|
